INTRODUCTION

The preparation of this summary of knowledge is part of the Bureau of Land Management's (BLM) extensive program to conform with the National Environmental Policy Act (1969) in its administration of the leasing program for submerged lands. The purpose of this summary is to present in a usable form the most up-to-date survey of what is known about the environment that might be impacted by mineral exploration and development on the Outer Continental Shelf (OCS). In addition, the study identifies data gaps and recommends areas where future research is needed. These recommendations may be used in the structuring of field and laboratory research programs, similar to those that the BLM is presently conducting in Southern California. The complete summary of knowledge forms a basis for planning the development of offshore oil and gas resources in a manner which will protect both the marine and coastal environments.

The geographic area covered in this summary is the coastal zone and continental borderland of Central and Northern California. The area is defined as lying south of the California-Oregon border, and north from (and inclusive of) the Northern Channel Islands of San Miguel, Santa Rosa, Santa Cruz and Anacapa and the Los Angeles-Ventura county line. The continental borderland for the purpose of this summary extends one hundred nautical miles seaward from the shoreline and includes the continental shelf and slope. The Coastal Zone is composed of the twelve coastal counties of Del Norte, Humboldt, Mendocino, Sonoma, Marin, San Francisco, San Mateo, Santa Cruz, Monterey, San Luis Obispo, Santa Barbara and Ventura; also included in the Coastal Zone are the counties of Napa, Solano, Contra Costa, Alameda and Santa Clara, which abut San Francisco Bay.

This summary of knowledge has been grouped into three broad subject areas, describing the physical, biological and socio-economic conditions of the study area. The topics covered within each broad subject area are presented in the following table, which gives the contents of the four volumes comprising this summary:

Volume I Physical Conditions

Chapter I	Summary of Conflicts and Hazards
Chapter II	Geological Features
Chapter III	Climate
Chapter IV	Physical' Oceanography
Chapter V	Chemical Oceanography
Chapter VI	Physical and Chemical Oceanography of San Francisco Bay
Chapter VII	Water Quality
	Physical Index

Volume II Biological Conditions

Chapter I	Benthic Fauna
Chapter II	Benthic Flora
Chapter III	Phytoplankton
Chapter IV	Zooplankton
Chapter V	Marine Mammals
Chapter VI	Fisheries
Chapter VII	Marine and Shore Birds
Chapter VIII	Terrestrial Vegetation and Wildlife
Chapter IX	Specially Protected Biota
	Biological Index

Volume III Socioeconomic Conditions

Chapter I	Industrial, Commercial and Military Activity
Chapter II	Petroleum Industry
Chapter III	Transportation Systems
Chapter IV	Demography and Socioeconomic Considerations
Chapter V	Land and Water Use ,
Chapter VI	Pollution Sources
Chapter VII	Historical and Archaeological Resources
Chapter VIII	Recreational Site Vulnerability
	Socio-Economic Index

Volume IV Master Bibliography

An effort has been made to minimize redundancy between chapters and to provide cross-references to assist the reader in locating either more detailed or complementary information in the companion chapters of the Summary.

A chapter which condenses certain data of obvious significance to the assessment of the possible effects on the environment of offshore energy resource development has been provided within each broad subject area. The chapters are: Summary of Conflicts and Hazards (Physical Conditions); Specially Protected Biota (Biological Conditions); and Recreational Site Vulnerability (Socioeconomic Conditions).

A master bibliography for the entire summary is contained in Volume IV. This master bibliography contains all references cited in the individual subject chapters as well as other uncited references relevant to a particular subject.

USER'S GUIDE
MASTER BIBLIOGRAPHY

The use of the Master Bibliography requires some guidance, because of the bibliography's computerized format and special data-recording requirements of this study. The bibliography consists of all references cited in each chapter of the study plus additional references that were not cited, but were considered by the chapter authors to be pertinent to the study and worthy " of inclusion as a part of the data base. The last entry in the first line of each reference shows the volume(s) and chapter(s) from which that reference originated. An asterisk to the left of a volume-chapter designation indicates that the reference was actually cited in that chapter. The page number of the citation can then be obtained by consulting the appropriate volume index.

An additional data recording requirement for this study was the classification of references into one of the following four categories:

Published (P)
Unpublished (U)
Current research (C)
Impending Environmental Program (I)

The category of each reference can be identified by consulting the letter code (P, U, C, or I) that follows the date of publication.

Because of the great number of references and the limited period of performance of this project, it has not been possible to resolve every inconsistency or omission in the Master Bibliography.

Therefore, please note the following items:

1. Undated references - these are indicated by the code 0000 in place of a date.

2. Inconsistencies in the listing of authors' initials, which result in slight alphabetization errors. For instance, if an author's first initial only was listed in one entry, and his first and second initials in another, the two entries may be slightly separated within the same last name grouping. Users should scan the entire last name grouping if they wish to obtain all references from a single author. In the case of agency listings, the user should consult each entry possibility to obtain a complete list of entries for an agency.

It is hoped that these problems will not seriously interfere with the use of the Master Bibliography.
